Waste

Degrader & Start Up Booster (emergency)

Application Data

Septclean **Emergency** Start Up Booster (one off treatment / seeding) - 100g Tub

The dosage is based upon the number of individuals using the sanitary installations. For a basis of 4 individuals, the following dosage applies:

Directions

Dilute the contents of the tub (100gs of brown powder) to 5-10litres (bucket) of luke warm water, let it stand for 10-20 minutes then pour into the toilet bowl and flush down.

Septclean 250FE **Waste Degrader** – 6 Sachet Tub (Seeding & Maintenance)

The dosage is based upon the number of individuals using the sanitary installations. For a basis of 4 individuals, the following dosage applies:

Directions - Seeding

Add 3 sachets to the toilet bowl and let it stand for at least 5 minutes to allow it to dissolve and activate. Flush solution down.

(Please note, Seeding is not necessary if Septclean Emergency Start Up Booster has been used prior to treatment).

Directions - Maintenance

Add 1 sachet to the toilet bowl and let it stand for at least 5 minutes to allow it to dissolve and activate. Flush sachet down. Repeat once a month thereafter.

Grease Traps (Restaurant & Campground systems) – Septclean Waste Degrader for use with commercial or industrial septic tanks & grease traps.

Directions – For Septclean Waste Degrader

Use at the end of each day after clean downs. Use 1 Sachet for each 5,000 litres (1,200 gallons) in your septic tank or grease trap for each 100 to 125 people. Mix one sachet with a cup of luke warm water and leave for 5-10mins before applying to sanitary system.

Leave the product to work overnight. It will clean all drains and pipe work it comes into contact with. If the system is still sluggish with foul odours, reapply Septclean Waste Degrader until system functions properly.

Degrader & Start Up Booster (emergency)

TRAVENA

Data Sheet

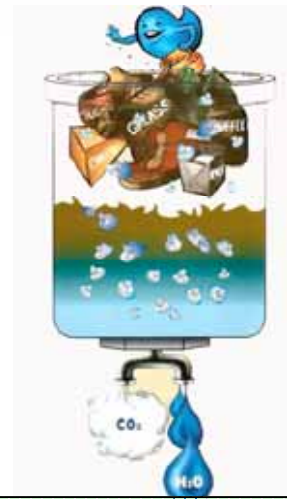

Grease Trap

Mini-Solupack Septic Tank & Grease Pitt Treatment.

Description

Septclean Waste Degrader is a powder based product containing a high concentration of micro-organisms to liquefy and digest grease, cellulose, starch etc...

Easily Maintain your Septic System

When functioning properly, house hold wastes are collected in your septic tank and then broken down, liquefied, and deodorized. Because this process is biological, it is easily upset and may stop working.

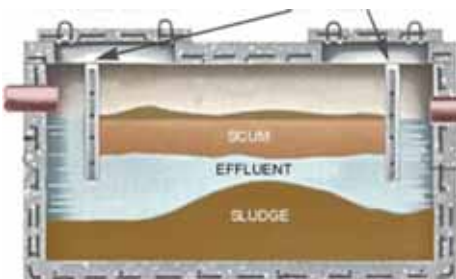

Some common factors that tend to upset the natural process are:

- **Overuse of disinfectants**
- **Overuse of bleaches**
- **Overuse of detergents**
- **Very hot or cold conditions**

Such factors kill the micro-organisms that work to keep your septic system running properly. Septclean replenishes and boosts the supply of these valuable micro-organisms and allows natural activity to continue.

Understanding the septic tank system

If you could look inside your septic tank, you would find three layers. The top layer is the "Scum" layer where organic material floats to the surface. Bacteria in the septic tank biologically convert this material to a liquid. The middle layer is the "Effluent" layer where mostly clear water will be found. This clear water is the only layer that should enter your absorption area. The bottom layer is the "Sludge" layer. This layer is where the inorganic or inert solid materials and the by-products of bacterial digestion sink to.

All household waste is disposed of through the septic system. The proper operation of the septic is essential to health, property value and the ecology. A small commitment to the care of your septic system will protect you from the nightmare created by a failing system.

Benefits & Advantages

- Reduces frequent pumping of septic tank
- Extends life of drain area
- Controls methane production
- Improves drain field percolation
- Keeps sewer lines open & free-flowing
- Provides rapid start-up of septic tanks
- Neutralizes detergent bleach
- Prevents drain blockages
- Will not attack plastic or metal plumbing
- Degrades waste faster
- Degrades paper, grease and vegetable waste
- Controls odours
- Very easy application
- Long shelf life
- Can be handled without danger, much safer than harsh chemicals
